PROLYTE THEATRE PRODUCTS

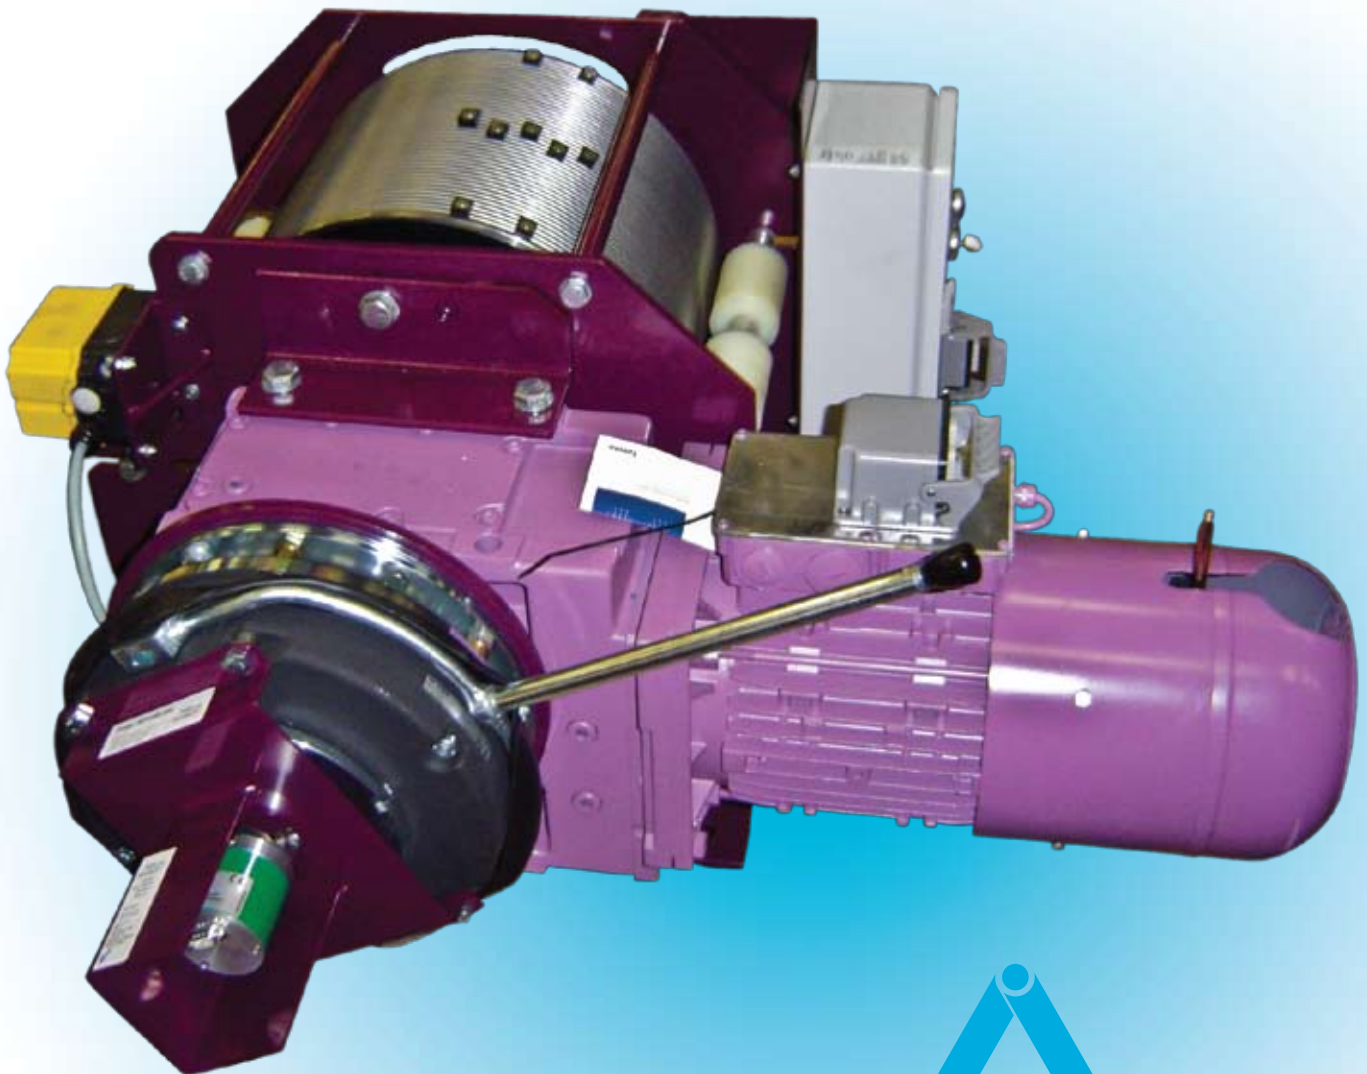

PROLYTE ON STAGE

New developments in the Prolyte Theatre Products range reflect the unique Prolyte approach to combine unrivalled technology with a personal touch.

Prolyte has teamed up with two expert companies that will consolidate its profound knowledge and product range for applications in theatrical environments. Partners Silicon Theatre Scenery and Silk both have a wealth of practical experience in providing staging and theatrical solutions. With their shared knowledge, Prolyte, STS and Silk are able to translate the specific technical requirements of the theatrical environment into comprehensive solutions and the right products to match.

This partnership is modelled to real Prolyte standards; the mutual philosophy is based on the intention that the right answer prevails over easy sales.

FULL RANGE DRIVE SYSTEMS

Apart from its existing programme of Theatre Products, like Protrac and the Truss and Staging range, Prolyte is now able to offer a full programme of drive systems and winches. Whether permanently mounted or based on modular and mobile installations, from simple, stand-alone systems or single line winches to complete fly-walls or theatre installations, Prolyte offers the solutions that will suit your situation.

These full-fledged possibilities are complemented with control systems, straightforward and reliable, incorporating SIL 3 safety levels where needed, complying with EU standards.

CONSULTANCY, INSTALLATION, SUPPORT

From own experience we know that the theatre market has its own special requirements. Therefore Prolyte offers tailor-made products and services. The extent of Prolyte's involvement is guided by the customer's demands, ranging from clear-cut delivery of a winch system to a complete turnkey installation. Consultancy, project management, product development and sales support are just examples of the services Prolyte provides. No need to say that all our installed systems can rely on a dedicated 24/7 service support.
